Report Overview

This report documents the findings of a DNS permutation scan conducted using **DNSTwist** (dnstwist.it) against the primary domain of Victoria's Secret & Co. — **victoriassecret.com**. The purpose of this scan is to enumerate all registered lookalike, typosquatted, and visually deceptive domain variants that could be exploited by threat actors for phishing, credential harvesting, brand impersonation, or business email compromise (BEC).

DNSTwist applies 14 distinct fuzzing algorithms to generate permutations of the target domain, then performs live DNS resolution, GeoIP lookup, MX record enumeration, and nameserver identification for each variant. The results are classified into two primary categories: **defensive registrations** (domains owned by Victoria's Secret or its brand protection service MarkMonitor) and **third-party threat domains** (domains registered by unknown parties, carrying phishing or impersonation risk).

Each category below is analysed in detail — covering the DNS pattern, registered nameservers, mail infrastructure indicators, geolocation context, and threat assessment — structured in the format used in professional threat intelligence reporting.

Scan Target	victoriassecret.com
Tool Used	DNSTwist v2.x (dnstwist.it)
Total Variants	131
Enumerated Brand-Owned/ Defensive	63 domains (MarkMonitor / Cloudflare NS)
Third-Party Threat	68 domains (independent registrars)
Domains Mail-Capable (Active MX) Fuzz	24 domains — 16 with independently controlled MX

What Are Defensive Registrations?

Defensive domain registration is a standard brand protection practice in which an organisation proactively registers predictable typosquatted or lookalike variants of its primary domain to prevent abuse by third parties. Victoria's Secret employs **MarkMonitor**, one of the world's leading brand protection and domain management firms, to hold these registrations. Domains under MarkMonitor nameservers (ns1.markmonitor.com) or Cloudflare are considered brand-controlled and pose no threat in their current state.

Of the 131 variants enumerated, **63 domains are confirmed brand-owned**. These are grouped below by fuzzer type to show the defensive coverage pattern. While no immediate threat action is required, these domains should be periodically verified to detect any unexpected nameserver changes, which would indicate a domain has been transferred away from MarkMonitor control.

1.1 Addition Variants (10 domains)

Pattern: A single character is appended to the end of 'victoriassecret', creating domains such as victoriassecrets.com or victoriassecrett.com. These variants exploit the natural tendency of users to accidentally type an extra character when entering a URL rapidly. All 10 addition variants are registered under ns1.markmonitor.com, demonstrating thorough defensive coverage of this fuzzer class.

DOMAIN	NAMESERVER	MX RECORD	GEO
victoriassecret5.com	ns1.markmonitor.com	— — — —	United Sta
victoriassecret6.com	ns1.markmonitor.com	— — — —	United Sta
victoriassecretc.com	ns1.markmonitor.com	— —	United Sta
victoriassecretq.com	ns1.markmonitor.com		United Sta
victoriassecretl.com	ns1.markmonitor.com		United Sta
victoriassecret0.com	ns1.markmonitor.com		United Sta
victoriassecretf.com	ns1.markmonitor.com		United Sta
victoriassecretz.com	ns1.markmonitor.com		United Sta
victoriassecrett.com	ns1.markmonitor.com		United Sta
victoriassecretu.com	ns1.markmonitor.com		United Sta

OBSERVATIONS

- All 10 addition variants are owned by Victoria's Secret via MarkMonitor — complete coverage.
- No MX records present — these domains are parked defensively and not used for mail.
- Confirms proactive registration of single-character suffix variants (a-z, 0-9 sampling).
- No threat action required. Maintain MarkMonitor management and renew registrations annually.

1.2 Bitsquatting Variants (5 domains)

Pattern: Bitsquatting exploits hardware bit-flip errors — a single bit change in memory or network packets can silently alter a DNS query character (e.g., 'v' flips to 'f' via a 1-bit difference in ASCII). These are not typos made by users but rather hardware or network errors. Domains like **fictoriassecret.com** and **viktoriassecret.com** fall into this category. All 5 are defensively registered under MarkMonitor.

DOMAIN	NAMESERVER	MX RECORD	GEO
fictoriassecret.com	ns1.markmonitor.com	— — — —	United Sta
victoriassecret.com	ns1.markmonitor.com	—	United Sta
victoriessecret.com	ns1.markmonitor.com		United Sta
vikoriassecret.com	ns1.markmonitor.com		United Sta
vistoriassecret.com	ns1.markmonitor.com		United Sta

OBSERVATIONS

- Bitsquatting is a low-frequency but technically sophisticated attack vector targeting infrastructure.
- All detected bitsquat variants are brand-owned — strong defensive posture confirmed.
- This indicates Victoria's Secret's brand protection team accounts for non-user-error attack vectors.

1.3 Dictionary Variants — Brand-Owned Subset (7 of 8 domains)

Pattern: Dictionaryfuzzingprependsorappends commonweb-relatedwords (e.g., 'www', 'http', 'online', 'connect', 'my') to the target domain. Variants like **myvictoriassecret.com**, **victoriassecretonline.com**, and **wwwvictoriassecret.com** are highly plausible phishing candidates because they mimic portal subdomains or campaign URLs. Seven of the eight dictionary variants are owned by MarkMonitor. One — **victoriassecretmy.com** — is not brand-owned and is covered in Section 2.

DOMAIN	NAMESERVER	MX RECORD	GEO
httpvictoriassecret.com	ns1.markmonitor.com	— — — —	United Sta
myvictoriassecret.com	ns1.markmonitor.com	— — —	United Sta
victoriassecret-online.com	ns1.markmonitor.com		United Sta
victoriassecretconnect.com	ns1.markmonitor.com		United Sta
victoriassecretonline.com	ns1.markmonitor.com		United Sta
www.victoriassecret.com	ns1.markmonitor.com		United Sta
wwwvictoriassecret.com	ns1.markmonitor.com		United Sta

OBSERVATIONS

- Dictionary domains are high-value phishing targets — brand ownership is critical for these.
- Variants like 'victoriassecretonline.com' are highly deceptive to non-technical users.
- Brand coverage is strong (7/8 owned). The unowned variant requires immediate review.

1.4 TLD-Swap Variants — Brand-Owned Subset (8 of 16 domains)

Pattern: TLD swappingreplacethe .com extension withalternativetop-level domains (.net, .org, .app, .biz, .info, .eu, .uk, .pw). Users often assume that adding .net or .org to a brand name reaches a legitimate site. Victoria's Secret owns eight TLD variants through MarkMonitor, covering the most common generic TLDs. The remaining eight — including .xyz, .online, .live, .site, .top, .de, .co, and .cn — are discussed in Section 2.

DOMAIN	NAMESERVER	MX RECORD	GEO
victoriassecret.cn	ns1.markmonitor.com	— — — —	China
victoriassecret.app	ns1.markmonitor.com	— — — —	United Sta
victoriassecret.biz	ns1.markmonitor.com	—	United Sta
victoriassecret.eu	ns1.markmonitor.com		United Sta
victoriassecret.info	ns1.markmonitor.com		United Sta
victoriassecret.net	ns1.markmonitor.com		United Sta
victoriassecret.org	ns1.markmonitor.com		United Sta
victoriassecret.pw	ns1.markmonitor.com		United Sta
victoriassecret.uk	ns1.markmonitor.com		United Sta

OBSERVATIONS

- Coverage of .net, .org, .app, .biz, .info, .eu, .uk, .pw is consistent with enterprise brand policy.
- Critical TLDs like .xyz, .live, .online are NOT owned — these are active third-party threats.
- Recommend acquiring victoriassecret.de and victoriassecret.co to close defensive gaps.

1.5 Remaining Brand-Owned Variants (Other Fuzzers)

The remaining brand-owned domains span six additional fuzzer types: **insertion** (15 of 20), **omission** (7 of 14), **transposition** (3 of 9), **homoglyph** (1 of 3), **hyphenation** (2 of 3), and **various** (1 of 1). These cover single-character insertions, deletions, adjacent-character swaps, and hyphenation variants. The brand-owned coverage in these categories is partial — leaving multiple threat-level domains in Section 2.

[illegible]

OBSERVATIONS

- Partial coverage in insertion/omission/transposition leaves threat actors gaps to exploit.
- Key unowned omissions: vicoriassecre.com, victorissecret.com — actively parked in Germany.
- Repetition variants (victorriassecre.com) are brand-owned; others in Netherlands are not.
- Recommend legal review of coverage gaps and prioritised registration of highest-risk gaps.

Overview

The following 68 domains are registered by unknown third parties on nameservers outside of Victoria's Secret's brand protection infrastructure. They range from domain parking operations (which can be monetised via ad-injection or rapidly converted to phishing) to domains with fully configured mail (MX) records indicating active phishing infrastructure readiness. Each group is analysed with its DNS pattern, infrastructure details, and specific threat context.

2.1

Homoglyph Domains — Visually Deceptive Characters

CRITICAL

What Is Homoglyph Attack?

A homoglyph attack substitutes characters that are visually identical or near-identical to the original — for example replacing lowercase 'i' with lowercase 'l' (letter L), or replacing 'rn' with 'm'. The resulting domain looks authentic to the human eye at a glance, especially in email clients, browser address bars, or mobile screens where font rendering compresses spacing. This makes homoglyph domains the most dangerous class for targeted spear-phishing, CEO fraud, and credential harvesting.

DOMAIN	NAMESERVER	MX RECORD	GEO
victoriassceret.com	ns1.parkingcrew.net	— —	Germany
victoriasssecret.com	ns1.gofruits.co		United Sta

Detailed Analysis

victoriasssecret.com — This domain substitutes the letter 'i' in 'victoria' with a lowercase 'l', producing 'victoria'. In most sans-serif fonts (Arial, Helvetica, Roboto), these characters are rendered at identical or near-identical widths. The domain resolves to an IP in the United States and is hosted under **ns1.gofruits.co**, a third-party registrar with no affiliation to Victoria's Secret. Critically, an **empty MX record is present**, indicating mail infrastructure has been partially configured. This domain is classified **CRITICAL** — it could be activated for phishing email delivery with minimal configuration.

victoriassceret.com — This domain transposes the letters 'e' and 'r' in 'secret' to produce 'sceret', while maintaining the rest of the domain intact. Hosted on **ns1.parkingcrew.net** in Germany, ParkingCrew is a domain monetisation platform that generates revenue by displaying ads on parked domains. While currently in passive/parked state (no MX), ParkingCrew domains can be reassigned to active hosting at any time and represent a latent phishing risk. Classified **HIGH**.

OBSERVATIONS

- victoriasssecret.com: i→l substitution — visually identical in most common fonts. MX record partially configured. **CRITICAL**.
- victoriassceret.com: Hosted on ParkingCrew (Germany) — passive now but convertible to phishing instantly.
- Homoglyph domains are the primary vector for executive impersonation (CEO fraud) and spear-phishing.
- Recommend submitting victoriasssecret.com to registrar abuse desk and requesting immediate suspension.
- Monitor victoriassceret.com via certificate transparency logs — any TLS cert issuance signals activation.

Insertion Variants With Active Mail (MX) Records

CRITICAL

Pattern: Insertion fuzzing adds an extra character anywhere within the domain string. The resulting domain is one character longer than the original — e.g., 'victor**i**sassecret.com' or 'victro**r**iassecret.com'. These are less visually convincing than homoglyphs but highly effective in phishing emails where the domain appears in a hyperlink and users do not carefully inspect the full URL. Three insertion variants carry active MX records on third-party mail infrastructure — classified **CRITICAL**.

DOMAIN	NAMESERVER	MX RECORD	GEO
victor i sassecret.com	ns1.abovedomains.com	park-mx.above.com	Australia
victro r iassecret.com	dns101.registrar-servers.com	mx.plingest.com	United Sta
v j victoriassecret.com	ns1.gofruits.co	mail1.namebrightmail.com	United Sta
victori a ssecret.com	expired1.namebrightdns.com	— — —	United Sta
victoria a ssecret.com	ns1.torresdns.com		Netherland
bvictor i assec r et.com	ns27.domaincontrol.com		??
vuictor i assec r et.com	ns67.domaincontrol.com		

Detailed Analysis

victori**sassecret.com** (Australia) — Registered under **ns1.abovedomains.com** with MX record **park-mx.above.com**. Above.com is a domain parking company, but the presence of an MX record through their parking service means this domain can receive and potentially send email. The domain has been active long enough to be picked up in parking — suggesting deliberate registration to capitalise on brand confusion. Classified **CRITICAL**.

victror**iassecret.com** (United States) — This domain is the most alarming insertion variant. It is hosted on **dns101.registrar-servers.com** (Namecheap infrastructure) with MX record **mx.plingest.com**. Unlike parking MX providers, plingest.com is a third-party mail filtering/routing service, suggesting the registrant has actively configured mail handling beyond a default parking setup. This indicates deliberate email infrastructure setup. Classified **CRITICAL** — immediate takedown action recommended.

victoria**ssecret.com** (United States) — Hosted on an **expired NameBright DNS** nameserver (expired1.namebrightdns.com) with MX record **mail1.namebrightmail.com**. The expired nameserver status is notable — it indicates the domain may have previously been actively used and the owner has not renewed the DNS service, but the domain registration itself remains active. Expired NS with live MX is a common indicator of abandoned phishing infrastructure that may be re-activated. Classified **CRITICAL**.

vj**victoriassecret.com** (United States) — Hosted on **ns1.gofruits.co** with an empty MX record. The 'vj' prefix is a less convincing typo but the infrastructure pattern (gofruits.co NS, same as victoriassecret.com) suggests a common registrant may control multiple lookalike domains simultaneously — a pattern consistent with bulk phishing kit preparation. Classified **HIGH**.

victoriaa**ssecret.com** (Netherlands), **bvictor**i**assec**r**et.com**, **vuictor**i**assec**r**et.com** — Three additional insertion domains on third-party nameservers without MX records. The Netherlands-hosted domain (torresdns.com) is part of a domain parking cluster. The two unknown-geo domains (domaincontrol.com / GoDaddy) are likely parked awaiting deployment. Classified **MEDIUM**.

OBSERVATIONS

- victoriassecret.com: Active third-party MX (mx.plingest.com) — most likely intentional phishing setup. CRITICAL.
- victoriassecret.com: Above.com parking MX — can receive email. Australia-hosted. CRITICAL.
- victoriassecret.com: Expired DNS NS + active NameBright MX — abandoned or dormant phishing infra. CRITICAL.
- vjvictoriassecret.com shares gofruits.co NS with victoriassecret.com — possible single threat actor controlling both.
- Recommend cross-referencing WHOIS registrant data for gofruits.co-hosted domains to identify common actor.

2.3

Replacement Variants — Largest Threat Category (27 domains)

HIGH / MEDIUM

Pattern: Replacement fuzzing substitutes a single character in the domain with an adjacent keyboard key or visually similar character. It is the largest fuzzer category with 31 total results, of which 27 are third-party and 4 are brand-owned. These domains exploit fast typing errors and mobile keyboard adjacency. They are distributed across multiple international hosting clusters.

DOMAIN	NAMESERVER	MX RECORD	GEO
victoeiassecret.com	ns1.abovedomains.com	park-mx.above.com — park-	Australia
vicyoriassecret.com	ns1.abovedomains.com	mx.above.com	park- Australia

vivictoriassecret.com	ns1.hostresolver.com	—	Netherlands
victoriassectet.com	ns1.gofruits.co	—	United Sta
victoriassecret.com	ns1.rentondc.com	—	Netherlands
victoriassecre.com	ns1.rentondc.com	—	Netherlands
victoriassecrtr.com	ns1.torresdns.com	—	Netherlands
victotiassecret.com	ns1.torresdns.com	—	Netherlands
victoruassecret.com	ns1.redmondcd.com	—	Germany
victoriassexret.com	ns1.redmondcd.com	—	Germany
victoriassecret5.com	ns41.domaincontrol.com	—	?

Infrastructure Cluster Analysis

Australia/abovedomains.com cluster (9 domains): victoeiassecret.com, victoriassecret.com, victoroassecret.com, victoriasseviet.com, cictoriassecret.com, victpriassecret.com, victoriassecrwt.com, bictoriassecret.com, vicyoriassecret.com — all registered under ns1.abovedomains.com. Eight of these nine carry the MX record **park-mx.above.com**, confirming the Above.com parking service is the mail handler. The consistent NS and MX provider across all nine strongly suggests **bulk registration by a single actor** using the Above.com

parking platform. Classified **CRITICAL** collectively due to MX presence.

Netherlands cluster (7 domains): victiriassecret.com (hastydns.com), victoriasaecret.com (koaladns.com), vixtoriassecret.com (domainmx.com), victoriaasecret.com (domainmx.com), (hostresolver.com), victoriassrcrret.com and victoriassecrer.com (rentondc.com), victoriassecrrt.com and victotiassecret.com (torresdns.com) — nine Netherlands-hosted domains across five different NS providers. The spread across multiple registrars complicates bulk takedown. None carry MX records currently. Classified **MEDIUM**.

vixtoriassecret.com record (United States, parklogic.com) — This domain carries MX **mx156.hostedmxserver.com**, a dedicated mail hosting service. Unlike parking MX records, this indicates the registrant has separately configured email hosting — a strong indicator of active phishing infrastructure preparation. Classified **CRITICAL**.

Germany cluster (4 domains): victoriasdecret.com (parkingcrew.net), victoruassecret.com victoriassexret.com (redmondcd.com) — all parked, no MX. ParkingCrew Germany domains are monetised via ads but can be redirected to phishing pages. Classified **MEDIUM**.

OBSERVATIONS

- Australia cluster: 9 domains, 8 with MX via Above.com — single actor bulk registration. **CRITICAL**.
- vixtoriassecret.com: Dedicated mail hosting MX (hostedmxserver.com) — active phishing setup. **CRITICAL**.
- Netherlands cluster: 9 domains across 5 NS providers — distributed to complicate mass takedown.
- Germany ParkingCrew cluster: Passive now but convertible to phishing redirect with minimal effort.
- victoriassectet.com (gofruits.co, US): Third domain on gofruits.co NS — consistent with multi-domain actor.
- Recommend UDRP filing against Australia cluster domains. Prioritise vixtoriassecret.com for abuse report.

2.4

Omission Variants — Dropped Character Domains (7 domains)

HIGH / MEDIUM

Pattern: Omission fuzzing removes a single character from the domain string. The resulting domain is shorter by one character and can be very convincing in quick reads. Seven omission variants are third-party owned. Two carry active MX records.

DOMAIN	NAMESERVER	MX RECORD	GEO
victoriassecret.com	ns1.parkingcrew.net	— — — — — localhost	Germany
victoriassecret.com	ns1.parkingcrew.net	mx.victoriassecret.com.cust	Germany
victoriassecret.com	ns1.parkingcrew.net		Germany
victoriassecret.com	ns1.parkingcrew.net		Germany
victoriassecret.com	ns1.hastydns.com		Netherland
victoriassecret.com	ns1.sedoparking.com		United Sta
victoriassecret.com	dns1.name-services.com		Canada

Detailed Analysis

victoriassecret.com (Canada) — Drops the 'o' from 'victoria'. This is a convincing omission, as the resulting domain is only one character shorter and could easily be missed in a URL preview. It is hosted on **dns1.name-services.com** with MX record **mx.victoriassecret.com.cust.a.hostedemail.com** — a custom subdomain-based MX routing entry. This format (domain.cust.a.hostedemail.com) is used by hosted email services, confirming that email infrastructure has been deliberately configured for this domain. Classified **CRITICAL**.

victoriassecret.com (United States) — Drops the 'i' from 'victoria'. Hosted on **ns1.sedoparking.com** (Sedo, a major domain marketplace) with MX record 'localhost'. A 'localhost' MX entry is a non-functional mail configuration often left as a default by parking services. While not a live phishing mail server, Sedo-hosted domains are frequently listed for sale and can be quickly transferred to active operators. Classified **HIGH**.

Germany parkingcrew.net cluster (4 domains): vicoriassecret.com, victoiassecret.com, victorissecret.com, vitoriassecret.com — all hosted on ns1.parkingcrew.net in Germany. No MX records. This is a concentrated cluster of omission variants on a single parking platform, suggesting the same party registered these domains. ParkingCrew serves geo-targeted ads, meaning visitors to these domains may see ads that further confuse them about the legitimacy of the site. Classified **MEDIUM**. **ictoriassecret.com** (Netherlands) — Drops the leading 'v'.

Hosted on **ns1.hastydns.com**. This is a less convincing typo as it changes the start of the domain, but hastydns.com is a DNS provider associated with domain monetisation. No MX. Classified **MEDIUM**.

OBSERVATIONS

- victoriassecret.com: Custom subdomain MX routing via hostedemail.com — deliberate, active mail setup. CRITICAL.
- victoriassecret.com: Sedo marketplace listing — domain is for sale and easily weaponisable by a buyer.
- Germany cluster: 4 domains on same ParkingCrew NS — consistent single registrant, likely bulk-registered.
- ictoriassecret.com on hastydns.com (Netherlands) — lower deception value but part of a broader ecosystem.
- Recommend targeting victoriassecret.com for immediate abuse report and UDRP given active mail configuration.

2.5

Transposition Variants (6 domains)

MEDIUM

Pattern: Transposition swaps two adjacent characters. 'victoria**s**secret' becomes 'victori**s**asecret'. These are classic fast-typing errors. Six transposition variants are third-party owned, none with MX records. However, three are hosted in the Netherlands on the known parking/reseller cluster (hastydns, domainmx, smtmdns).

DOMAIN	NAMESERVER	MX RECORD	GEO
victoraissecret.com	ns1.abovedomains.com	park-mx.above.com	Australia
vitcoriassecret.com	ns1.fabulous.com	-----	United Sta
vicotriassecret.com	pdns09.domaincontrol.com		United Sta
victoria s secret.com	ns1.smtmdns.com		Netherland
victori s asecret.com	ns1.hastydns.com		Netherland
victori a secret.com	ns1.domainmx.com		Netherland

OBSERVATIONS

- No active MX records across all 6 domains — currently passive/parked state.
- victoraissecret.com (Australia, abovedomains.com): Part of the Australia bulk-registration cluster.
- Netherlands cluster (smtmdns, hastydns, domainmx): Consistent with known parking reseller ecosystem.
- vitcoriassecret.com and vicotriassecret.com (US, fabulous.com / domaincontrol.com): Domain marketplace listings.
- Classified MEDIUM — no immediate phishing capability but represent a pool of deployable domains.
- Priority: Monitor for MX record activation or hosting changes that indicate impending weaponisation.

2.6

Vowel-Swap Variants (2 domains)

CRITICAL

Pattern: Vowel-swap replaces one vowel with another (e.g., 'victoria**s**secret' → 'victori**a**ssicret' or 'victori**o**ssecret'). Both vowel-swap variants are third-party owned, and both carry active MX records — elevating them to CRITICAL status.

DOMAIN	NAMESERVER	MX RECORD	GEO
victoriassicret.com	ns3.abovedomains.com	park-mx.above.com	Australia
victoriossecret.com	ns1.m.glbns.com	mx.microware.hu	Hungary

Detailed Analysis

victoriossecret.com (Hungary) — Substitutes 'a' with 'o' in 'victoria', producing 'victorio'. Hosted on **ns1.m.glbns.com** (a Hungarian DNS provider) with MX record **mx.microware.hu**. Microware.hu is a Hungarian IT services company providing hosted email. This is a fully configured mail infrastructure hosted in Hungary — well outside the jurisdictional reach of US-based brand protection actions, making takedown significantly harder. The combination of a convincing vowel-swap domain, foreign hosting, and active mail server makes this one of the highest-risk domains in the entire scan. Classified **CRITICAL**.

victoriassicret.com (Australia) — Substitutes the 'e' in 'secret' with 'i', producing 'sictet'. Hosted under **ns3.abovedomains.com** with MX record **park-mx.above.com**. Part of the Australia Above.com parking cluster identified in Section 2.3. Classified **CRITICAL** due to active MX.

OBSERVATIONS

- victoriossecret.com: Hungarian hosting + dedicated mail server (microware.hu) — hardest to take down. **CRITICAL**.
- Hungarian jurisdiction means UDRP is still applicable but enforcement is slower. Prioritise Namecheap/registrar abuse route.
- victoriassicret.com: Australia cluster MX — consistent with bulk-registered parking infrastructure. **CRITICAL**.
- Both domains require immediate abuse reports to their respective registrars and hosting providers.
- Recommend monitoring victoriossecret.com via Shodan/Censys for any web server activation.

2.7

Repetition Variants (3 domains)

HIGH

Pattern: Repetition doubles a character — 'viictoriassecret.com'. Three repetition variants are third-party: viictoriassecret.com (Ireland, MX active), victooriassecret.com (Netherlands), and vvictoriassecret.com (Netherlands).

DOMAIN	NAMESERVER	MX RECORD	GEO
victooriassecret.com	ns1.domainmx.com	— — eforward1.registrar-	Netherlands
viictoriassecret.com	ns1.torresdns.com	server	Netherlands
viictoriassecret.com	dns1.registrar-servers.com		Ireland

OBSERVATIONS

- viictoriassecret.com (Ireland): MX record eforward1.registrar-servers.com — email forwarding configured. **HIGH**.
- Email forwarding MX records allow the registrant to receive and redirect inbound mail — a phishing enabler.
- victooriassecret.com and vvictoriassecret.com (Netherlands): Parked, no MX. **MEDIUM**.
- Recommend abuse report to registrar-servers.com for viictoriassecret.com mail forwarding setup.

2.8

TLD-Swap Threat Variants (8 domains)

HIGH / MEDIUM

Pattern: The brand name is kept identical but the TLD is swapped. These are the most visually convincing lookalike domains of all — a user seeing 'victoriassecret.live' or 'victoriassecret.online' in a browser tab has no typographic signal that anything is wrong. Eight TLD variants are third-party owned.

DOMAIN	NAMESERVER	MX RECORD	GEO
victoriassecret.co	!ServFail	— — —	?
victoriassecret.online	ns3.afternic.com	mailstore1.secureserver.ne	United Sta
victoriassecret.xyz	ns1.afternic.com	— — —	United Sta
victoriassecret.live	ns49.domaincontrol.com		United Sta
victoriassecret.site	ns1.dns-parking.com		United Sta
victoriassecret.de	ns35.domaincontrol.com		?
victoriassecret.top	ns1.taoba.com		?

Detailed Analysis

victoriassecret.live — Registered on GoDaddy (domaincontrol.com) with MX **mailstore1.secureserver.net**. Secureserver.net is GoDaddy's hosted email product, meaning the registrant has purchased an email hosting plan for this domain — a deliberate investment in mail infrastructure. The .live TLD has no brand association with Victoria's Secret and is a common phishing TLD. Classified **CRITICAL**.

victoriassecret.online and **victoriassecret.xyz** — Both registered through **Afternic** (ns3.afternic.com / ns1.afternic.com), GoDaddy's domain resale marketplace. Empty MX records present. Afternic listings mean these domains are actively listed for sale to any buyer — including threat actors. The .xyz and .online TLDs are heavily used in phishing campaigns globally. Classified **HIGH**.

victoriassecret.top — Hosted on **ns1.taoba.com**, a Chinese DNS registrar. The .top TLD is one of the most commonly abused TLDs in phishing and spam campaigns globally, ranked consistently high in abuse statistics by ICANN and SpamHaus. Chinese registrar hosting reduces enforcement options. No MX. Classified **HIGH**.

victoriassecret.de — The .de ccTLD (Germany) registered on domaincontrol.com. Victoria's Secret has retail presence in Germany, making this domain particularly dangerous for targeting German customers with localised phishing. No MX currently. Classified **HIGH**.

victoriassecret.site — Parked on dns-parking.com (United States). The .site TLD is generic and commonly used for temporary phishing sites. No MX. Classified **MEDIUM**.

victoriassecret.co — DNS returns ServFail — the domain may be in a limbo state (registered but DNS not configured, or recently dropped). Should be monitored for re-activation. Classified **MEDIUM**.

OBSERVATIONS

- victoriassecret.live: GoDaddy email hosting MX (secureserver.net) — paid mail plan configured. **CRITICAL**.
- victoriassecret.online / .xyz: Listed on Afternic resale marketplace — available to any buyer immediately.
- victoriassecret.top: Chinese registrar + highest-abuse TLD globally. High enforcement difficulty. **HIGH**.
- victoriassecret.de: Targets German market where VS has physical stores — localised phishing risk. **HIGH**.
- Recommend acquiring .de and .site. File abuse reports with GoDaddy for .live domain urgently.
- Submit .online and .xyz to Google Safe Browsing and PhishTank pre-emptively.

2.9

Subdomain Dot-Insertion Variants (5 domains)

MEDIUM

Pattern: A dot is inserted within the domain string, splitting it into a subdomain and a second-level domain (e.g., 'victoria.ssecret.com'). The browser renders this as a subdomain of 'ssecret.com', not of 'victoriassecret.com'. Users focused on the beginning of a URL ('victoria') may not notice the structural split. This technique is used in phishing kits to construct URLs like 'secure.login.victoria.ssecret.com'.

DOMAIN	NAMESERVER	MX RECORD	GEO
victoria.ssecret.com	nsg1.namebrightdns.com	— — — —	United Sta
victor.iassecret.com	ns1.namefind.com	—	United Sta
victoriass.ecret.com	ns1.namefind.com		United Sta
victoriasse.cret.com	!ServFail —		Germany
v.ictoriasssecret.com			Netherland

OBSERVATIONS

- None of the 5 subdomain variants carry MX records — currently low phishing capability.
- victoria.ssecret.com and victor.iassecret.com: Registered on Namefind (domain marketplace).
- v.ictoriasssecret.com (Netherlands): No NS resolution — unresolvable currently but domain is registered.
- victoriasse.cret.com (Germany): DNS ServFail — in limbo state similar to victoriasssecret.co.
- Primary risk: These base domains (ssecret.com, iassecret.com) can host subdomain phishing trees.
- Classified MEDIUM — monitor for any hosting activation or SSL certificate issuance.

2.10

Dictionary & Hyphenation — Unowned Variants

MEDIUM

Dictionary variant: victoriasscretmy.com — Appends 'my' to the brand name, mimicking a personal portal URL (MyVictoriaSecret). Hosted on **ns1.nexcess.net**, a US web hosting provider used for active websites. Unknown geolocation. No MX but active hosting infrastructure suggests this domain could serve a fake web portal.

Hyphenation variant: victoriass-ecret.com — Inserts a hyphen between the two 's' characters in 'victoriasscret'. Hosted on **ns1.dyna-ns.net**, a dynamic DNS provider. Dynamic DNS is frequently used by threat actors for fast-flux hosting — changing IP addresses rapidly to evade blocklists. No MX currently.

DOMAIN	NAMESERVER	MX RECORD	GEO
victoriasscretmy.com	ns1.nexcess.net	— —	?
victoriass-ecret.com	ns1.dyna-ns.net		United Sta

OBSERVATIONS

- victoriasscretmy.com: Nexcess hosting (active web infra) — could serve fake login portal without MX. MEDIUM.
- victoriass-ecret.com: Dynamic DNS (dyna-ns.net) — fast-flux capability is a threat actor evasion technique.
- Recommend submitting both to brand protection counsel for monitoring and potential UDRP action.
